

1. The advantage is that you can test the website the way that the average user would and see if everything works the way it should be.
2. If the website has a backend it may be difficult to test the backend with only Selenium, but other than that I cannot see any.
3. `<tr> <td> open </td> <td> myCase.html </td> </tr>`
4. `<tr> <td> click </td> <td> arg1 </td> </tr>`
5. Doing this makes it easier to read, but it isn't as powerful as some other programming languages like C# and C++.
